

# SATHISH VEERAPAN RESIDENCE

# Foreword

This elevation adopts a clean rectilinear composition with interlocking volumes. The elevation achieves depth through subtle projections and recesses, avoiding unnecessary ornamentation while ensuring visual interest. The double-height vertical strip of glass blocks enhances the perception of height and creates a strong architectural statement.

# PROJECT DETAILS

---

Location	Thanjavur , Tamilnadu
Firm	DEZINE& DUILD
Principal designer	Regan
Project team	Ar.Supriya
Project start Date	29-7-2025
Project End Date	30-9-2025
Number of Floors	G+ 1
Number of car parks	2
Vastu Compliant	YES

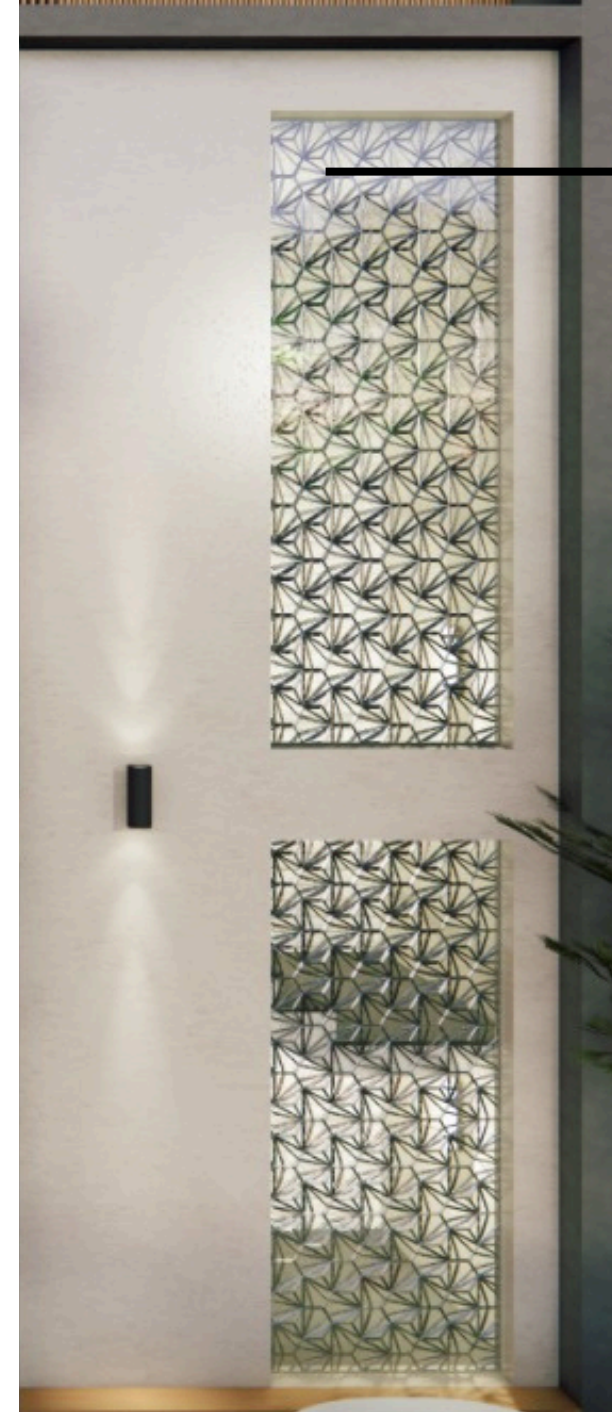

## Porch

- The space serves as a semi-open transition area, functioning as both a car porch and foyer.
- The open staircase becomes the central architectural element, guiding the eye upward and establishing vertical continuity within the compact plan.

The vertical wall of the staircase has been highlighted with cnc panels to play with light and shadows which enhances the transition space

These WPC fluted panels have been used to cover the overhead tank. But this also acts a major design element by making the building look ever more taller

# Material Palette

---

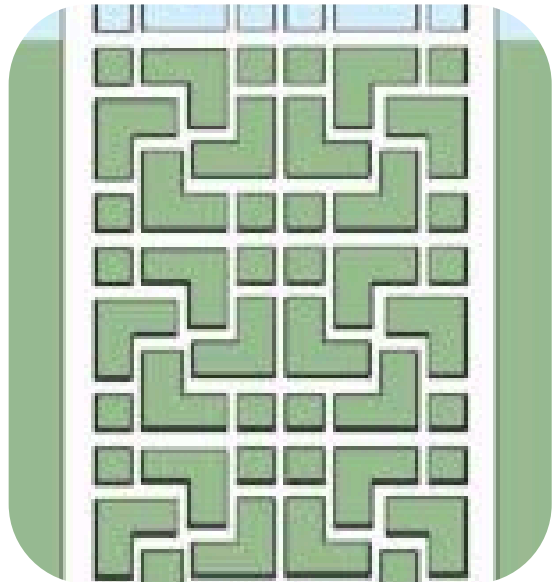

Wooden panel

Steel (Rafters)

Concrete

CNC (panels)
